2020 IEEE International Symposium on Circuits and Systems
Virtual, October 10-21, 2020

□ Complementary Filters in Sensors

General Atomics MQ-9 Reaper

Modern drone

□ Background

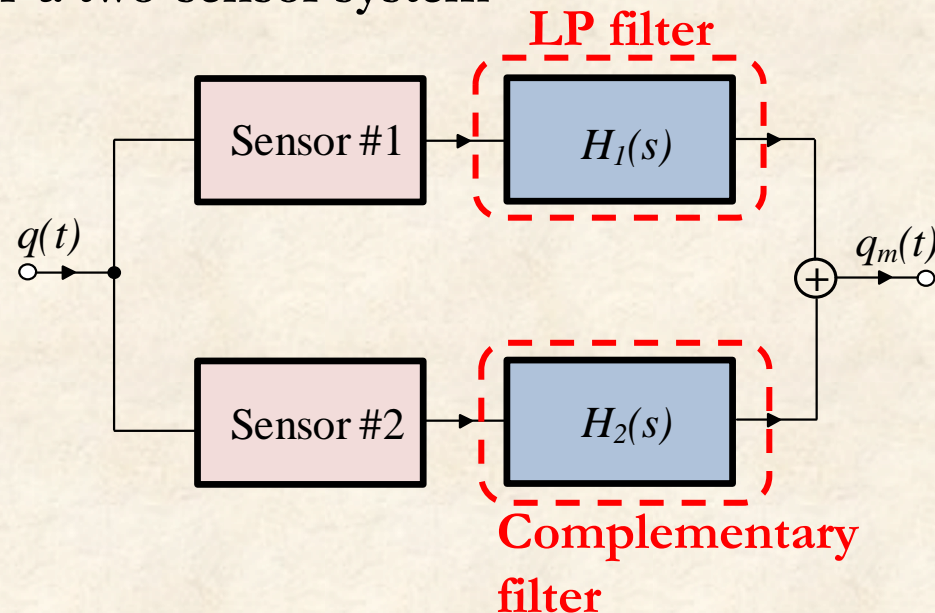

□ Circuit implementation

□ Simulation results

□ Conclusions

□ Future work

□ FBD of a two-sensor system

✓ Frequency-domain specifications → cut-off frequency of the LP filter

$$H_1(s) + H_2(s) = k$$

□ Background

□ Circuit implementation

□ Simulation results

□ Conclusions

□ Future work

□ Importance of FO filters

➤ Slope:

$$-6 \cdot (n + \alpha) \text{ dB/oct}$$

integer

fractional ($0 < \alpha < 1$)

- ✓ More precise control of the attenuation gradient
- ✓ Scaling of time-constants, allowing extremely large time-constants

□ Background

□ Circuit implementation

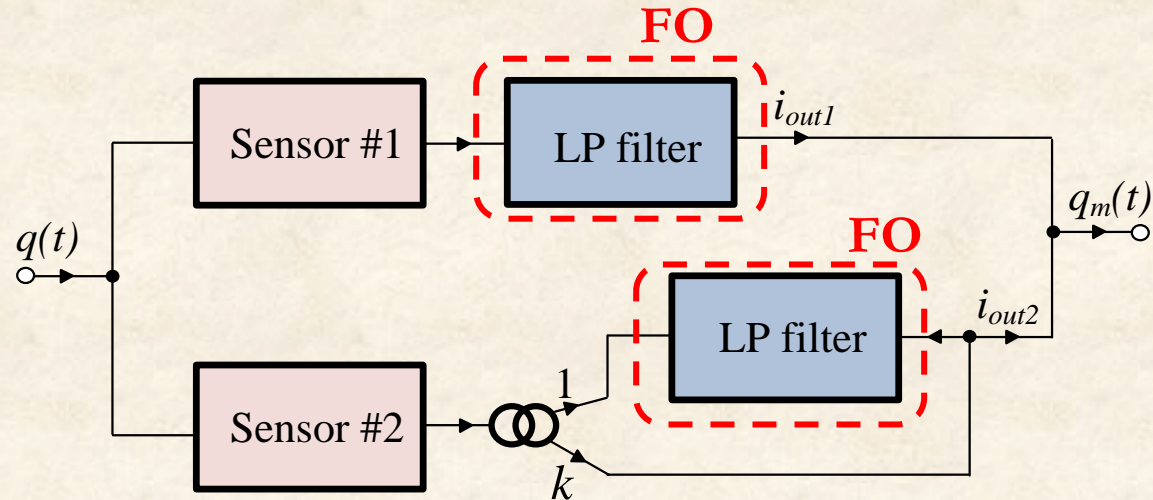

□ Simulation results

□ Conclusions

□ Future work

□ FBD of a two-sensor system

$$H_1(s) + H_2(s) = k$$

□ Background

□ Circuit implementation

□ Simulation results

□ Conclusions

□ Future work

FO LP filter of order α

$$H_1(s) = \frac{k}{(\tau s)^\alpha + 1}$$

$$0 < \alpha < 1$$

Background

Circuit implementation

Simulation results

Conclusions

Future work

Pole frequency:

$$\omega_0 = \frac{1}{\tau}$$

Cut-off frequency:

$$\omega_{c,lp} = \omega_0 \left[\sqrt{1 + \cos^2 \left(\frac{\alpha\pi}{2} \right)} - \cos \left(\frac{\alpha\pi}{2} \right) \right]^{1/\alpha}$$

Slope: $-6 \cdot \alpha \text{ dB/Oct.}$

FO Complementary filter of order α

$$H_2 = k - H_1(s) = k \frac{(\tau s)^\alpha}{(\tau s)^\alpha + 1} \quad 0 < \alpha < 1$$

Background

Circuit implementation

Simulation results

Conclusions

Future work

➤ Pole frequency:

$$\omega_0 = \frac{1}{\tau}$$

➤ Cut-off frequency:

$$\omega_{c,comp} = \omega_0 \left[\sqrt{1 + \cos^2 \left(\frac{\alpha\pi}{2} \right)} + \cos \left(\frac{\alpha\pi}{2} \right) \right]^{1/\alpha}$$

➤ Slope: $+6 \cdot \alpha \text{ dB/Oct.}$

□ Background

□ Circuit implementation

□ Simulation results

□ Conclusions

□ Future work

□ FO LP filter of order $1 + \alpha$

$$H_1(s) = \frac{k_1}{(\tau s)^{1+\alpha} + k_3(\tau s)^\alpha + k_2}$$

$$0 < \alpha < 1$$

$$(k = k_1/k_2)$$

➤ Pole frequency:

$$\omega_0 = \frac{1}{\tau}$$

➤ Cut-power frequency:

$$|H_1(\omega_{h,lp})| = 0.707k$$

➤ Slope: $-6 \cdot (1 + \alpha) \text{ dB/Oct.}$

FO Complementary filter of order $1 + \alpha$

Background

Circuit implementation

Simulation results

Conclusions

Future work

$$H_2 = k - H_1(s) = k \frac{(\tau s)^{1+\alpha} + k_3(\tau s)^\alpha}{(\tau s)^{1+\alpha} + k_3(\tau s)^\alpha + k_2} \quad 0 < \alpha < 1$$

$(k = k_1/k_2)$

➤ Pole frequency:

$$\omega_0 = \frac{1}{\tau}$$

➤ Cut-off frequency:

$$|H_1(\omega_{h,lp})| = 0.707k$$

➤ Slope: $+6 \cdot (1 + \alpha) \text{ dB/Oct.}$

❑ Implementation of FO filters

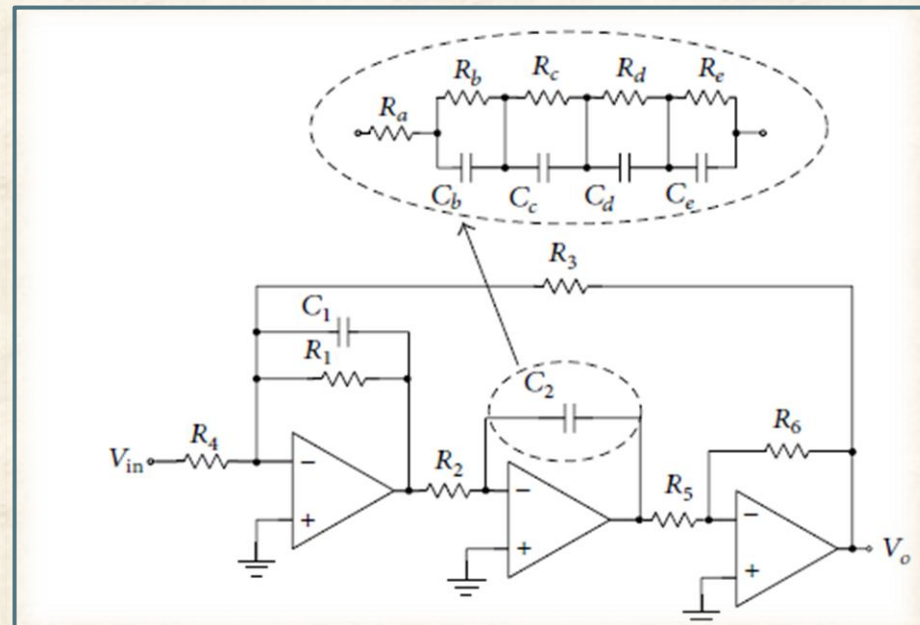

- ✓ Fractional-order capacitor (CPE) with molybdenum-disulfide polymer composite developed in KAUST

Commercial unavailability

❑ Implementation of FO filters

- ✓ Approximation by appropriate RC networks

Absence of electronic tuning

□ Background

□ Circuit
implementation

□ Simulation
results

□ Conclusions

□ Future work

□ Implementation of FO filters

- Approximation by integer-order transfer functions around a center frequency
- ✓ Various approximation tools: Continued Fraction Expansion (CFE), Oustaloup, Matsuda etc.

↓ **order** α

$$H(s) \cong \frac{A_n s^n + A_{n-1} s^{n-1} + \dots + A_1 s + A_0}{s^n + B_{n-1} s^{n-1} + \dots + B_1 s + B_0}$$

❑ Implementation of FO filters

- Approximation by integer-order transfer functions around a center frequency
- ✓ Various approximation tools: Continued Fraction Expansion (CFE), Oustaloup, Matsuda etc.

 **order** $1 + \alpha$

$$H(s) \cong \frac{A_{n+1}s^{n+1} + A_n s^n + \dots + A_1 s + A_0}{s^{n+1} + B_n s^n + \dots + B_1 s + B_0}$$

❑ Background

❑ Circuit implementation

❑ Simulation results

❑ Conclusions

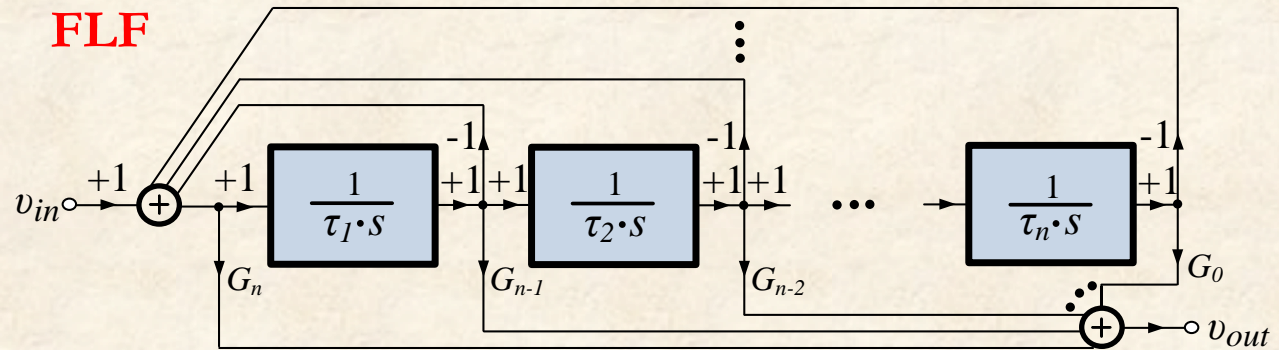

❑ Future work

Implementation of FO filters (order α)

Multi-feedback structures

FLF

IFLF

Background

Circuit implementation

Simulation results

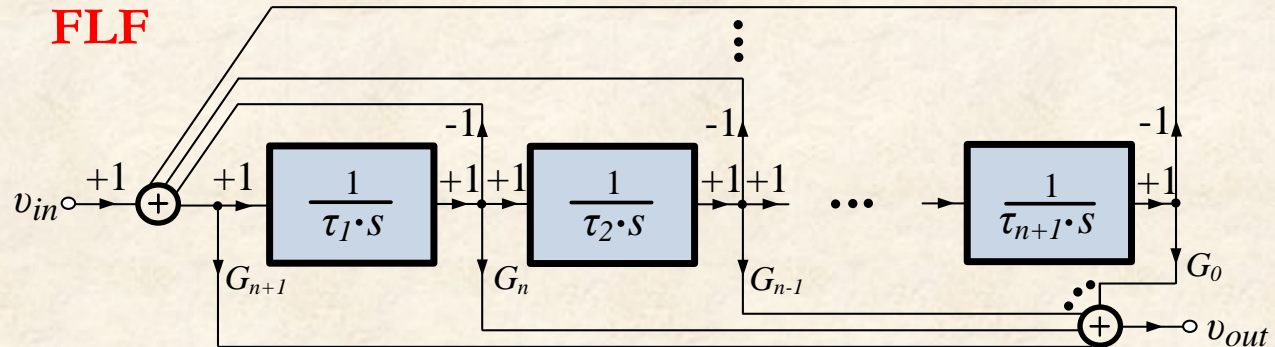

Conclusions

Future work

Implementation of FO filters (order $1 + \alpha$)

Multi-feedback structures

FLF

IFLF

Background

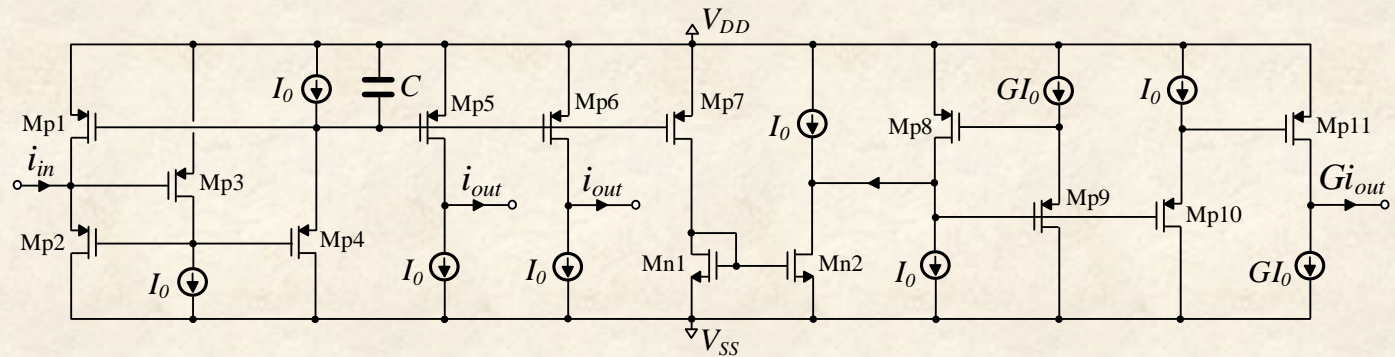

Circuit implementation

Simulation results

Conclusions

Future work

Log-domain lossless integrator

$$H_{int}(s) = \frac{1}{\tau s}$$

$$\tau = \frac{nCV_T}{I_0}$$

Electronic tunability of the time-constant & the scaling factor

Large signal current-voltage characteristic

Background

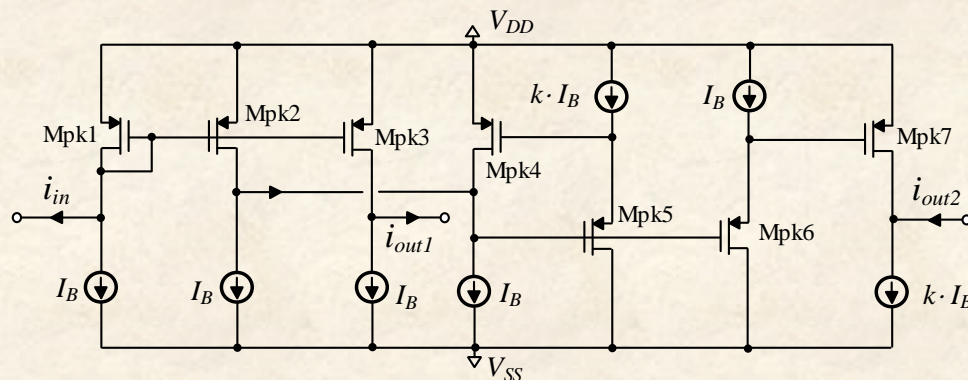

Circuit implementation

Simulation results

Conclusions

Future work

❑ Multiple-output current-mirror

$$i_{out1} = i_{in}$$

$$i_{out2} = k \cdot i_{in}$$

Electronic adjustment of the scaled output

Fully electronic control of the system

❑ Background

❑ **Circuit implementation**

❑ Simulation results

❑ Conclusions

❑ Future work

□ AMS 0.35μm CMOS process

➤ $V_{DD} = -V_{SS} = 0.75V$

□ Background

□ Circuit implementation

□ **Simulation results**

□ Conclusions

□ Future work

FO complementary gain responses

□ AMS 0.35μm CMOS process

➤ $V_{DD} = -V_{SS} = 0.75V$

□ Background

□ Circuit
implementation

□ **Simulation
results**

□ Conclusions

□ Future work

FO complementary phase responses

□ Background

□ Circuit
implementation

□ **Simulation
results**

□ Conclusions

□ Future work

Performance characteristics of the FO Complementary Filters

Variable	$\alpha=0.3$	$\alpha=0.5$	$\alpha=0.7$
$f_{-3dB}(Hz)$	11 (10.7) 5.4 (5.7)	10.9 (10.7) 5.6 (5.8)	10.2 (10.1) 5.2 (5.4)
$\angle H(f_{-3dB})(^{\circ})$	-59.7 (-58.3) 44.9 (44)	-67 (-66) 49.5 (48.8)	-72.1 (-71) 54 (53)
$\sigma[f_{-3dB}](Hz)$	0.09 0.08	0.12 0.06	0.11 0.06
$\sigma[\angle H(f_{-3dB})](^{\circ})$	0.4 1	0.6 1.2	0.6 1.3

❑ Background

❑ Circuit
implementation

❑ Simulation
results

❑ **Conclusions**

❑ Future work

- ✓ Implementation of novel FO complementary filters for the first-time in literature
- ✓ Implementation of FO complementary filters using only LP filters and a gain stage
- ✓ Log-domain lossless integrators for the implementation of the required multi-feedback structures
- ✓ Electronic tuning of the frequency characteristics and the scaling factors of the complementary filters

❑ Background

❑ Circuit implementation

❑ Simulation results

❑ Conclusions

❑ **Future work**

- ✓ Partial fraction decomposition tool for the implementation of the LP filter, reducing the number of MOS transistors and spread of values
- ✓ Use of other active elements which compose the integrators
- ✓ Other sensor applications, including orientation estimation in UAVs, accelerometers, gyroscopes and motion measurement

THANK YOU...!!!
